

App. No. 10/773,739

Amendment under 37 CFR §1.111

**AMENDMENTS TO THE CLAIMS**

Please amend the claims as set forth hereinbelow.

1. **(original)** An apparatus for treating metal working fluid, comprising:  
a heating vessel for receiving and holding metal-working fluid for treatment;  
a heater for heating the metal-working fluid in the heating vessel;  
an agitator for agitating the metal-working fluid within the heating vessel;  
an aerator for aerating the metal-working fluid within the heating vessel;  
a holding vessel for receiving and holding treated metal-working fluid from the heating vessel; and  
a de-mister,  
wherein:  
the agitator and aerator comprise an air flow source and air inlets provided in a bottom portion of the heating vessel so that air flow through the inlets and through the metal-working fluid agitates and aerates the metal-working fluid;  
and  
the air flow through the metal-working fluid flows out of the heating vessel through the de-mister.
2. **(original)** The apparatus of Claim 1, wherein the de-mister comprises a centrifuge impactor.
- 3.-4. **(cancelled)**
5. **(currently amended)** An apparatus for treating metal working fluid, comprising:  
a heating vessel for receiving and holding metal-working fluid for treatment;  
a heater for heating the metal-working fluid in the heating vessel;  
an agitator for agitating the metal-working fluid within the heating vessel;  
an aerator for aerating the metal-working fluid within the heating vessel;  
a holding vessel for receiving and holding treated metal-working fluid from the heating vessel; and  
an ion-exchange filter connected to ~~at least one of the heating vessel and~~ or the holding vessel for reducing a concentration in the metal-working fluid of at least one ~~metal,~~ metal.

Amendment under 37 CFR §1.111

6. **(original)** The apparatus of Claim 5, wherein one of the at least one metal is cobalt.
7. **(original)** The apparatus of Claim 5, wherein the ion-exchange filter includes a sulfonated divinyl-benzene-cross-linked polystyrene ion-exchange resin.
8. **(original)** The apparatus of Claim 5, wherein the ion exchange filter is connected to the holding vessel so as to enable recirculation of metal-working fluid from the holding vessel through the ion-exchange filter.
